## Control system for a large round baler

Control system for a large round baler. Twine arm 236 is pivotably mounted about a pivot pin 238 to a plate 239

mounted to the framework of baler 24, and is movable throughout a range of positions as illustrated in phantom in FIG. 11 to move the twine across the face of the bale during the twine wrapping operation.

## **Form No. 80 Series**

From this position, the Baler drive sprocket on the transmission output shaft is on the left side. GEHL Company reserves the right to make changes or improvements in the design or construction of any part of the unit without incurring the obligation to install such changes on any previously delivered units.

## **Gehl R105 Skid Loader**

Hydraloc™ automatic interlock system locks lift, tilt and drive systems when the operator leaves the seat, increasing operator safety. System also engages when the restraint bar is raised or the ignition switch is turned off. Lift arm hydraulic tubes are concealed and protected from the work environment.
